

Foam Party Safety

& Ingredient Information

HAVE QUESTIONS OR CONCERNS ABOUT OUR FOAM? NO PROBLEM!

SO... WHAT "IS" THE FOAM?

Our foam is **mostly water**, mixed with a heavily diluted professional foam solution designed specifically for kids foam parties.

What's In It?

- ✓ Water
- ✓ Glycerin

(Glycerin is a plant-derived ingredient used in many everyday personal care products and is known for being gentle on skin.)

****May contain coconut oil.**

- ✓ Sodium Lauryl Sulfate

*(*Sodium Lauryl Sulfate (SLS) is a common foaming ingredient used in everyday personal care products and is present in our foam only in a very low, highly diluted amount.)*

The solution is hypoallergenic, non-toxic, biodegradable, and formulated to be safe for kids, pets, and the environment.

- ✓ No harsh detergents
- ✓ No dyes
- ✓ No soaps
- ✓ No scary stuff

Our foam solution **meets professional event industry safety standards** and is used by licensed foam operators across the U.S.

WHAT ABOUT SKIN SENSITIVITY & RASHES?

In our experience, any allergic reaction is typically caused not by the foam itself, but by environmental factors such as:

- ✓ Grass
- ✓ Lawn treatments/fertilizers
- ✓ Insects
- ✓ Other outdoor elements present where children are playing

Similarly, eye irritation is most often caused by sunscreen, sweat, or dirt getting into the eyes rather than the foam.
